

## Chapter 4: Our System Tomorrow: 2050

Long-Range Vision, Multimodal Investments, and Scenario Evaluations

### Executive Summary: Future System Vision & Scenarios

Chapter 4 presents the regional transportation vision for 2050, identifying multimodal investments, policy strategies, and system enhancements designed to accommodate anticipated population and economic growth over the next 25 years.

#### Core Focus Areas: System Tomorrow: 2050

- **Congestion Management & Corridor Optimization:** Deployment of advanced traffic management systems (ATMS), adaptive signal control along Route 1 and Route 36, and targeted intersection capacity improvements.
- **Multimodal Connectivity:** Completion of the 25-mile Appomattox River Trail network, enhanced bicycle/pedestrian access to transit hubs, and ADA-compliant sidewalk networks throughout downtown commercial districts.
- **Transit Modernization:** Microtransit and on-demand mobility pilot programs in lower-density communities, expanded frequency on core PAT trunk routes, and enhanced park-and-ride amenities along I-95 and I-85.
- **Resilient & Sustainable Infrastructure:** Climate resiliency adaptations for flood-prone river crossings, infrastructure hardening, and electric vehicle (EV) charging corridors.
- **Smart Logistics & Freight Mobility:** Grade-crossing safety enhancements, truck parking facilities along I-95/I-85, and direct intermodal connector improvements.

The full Chapter 4 document is being finalized in conjunction with member jurisdiction feedback and regional travel demand model scenario runs.
