

Chapter 5: Funding the Plan

Financial Capacity Analysis, Revenue Forecasts, and Fiscally Constrained Plan

Executive Summary: Financial Capacity and Fiscal Constraint

Federal regulations require that the Long-Range Transportation Plan be fiscally constrained, demonstrating that anticipated federal, state, and local revenues will be sufficient to construct, operate, and maintain all proposed projects and programs through the 2050 planning horizon.

Funding Strategy Overview

- **Revenue Forecasting:** 25-year revenue projections based on historical allocations from the federal Highway Trust Fund, Commonwealth Transportation Fund, and regional funding programs.
- **Federal Program Allocations:** Strategic programming of Surface Transportation Block Grant (STBG), Congestion Mitigation and Air Quality (CMAQ), and Transportation Alternatives (TA) funds administered directly by TCAMPO.
- **State Prioritization (SMART SCALE):** Identifying high-scoring regional projects for Virginia's biennial SMART SCALE competitive funding process.
- **Operations & Maintenance:** Ensuring adequate funding allocations for routine roadway maintenance, bridge repairs, and transit agency operating subsidies prior to allocating discretionary capital funds.

The final Chapter 5 document will feature detailed financial tables, project cost estimates with year-of-expenditure (YOE) inflation adjustments, and programmatic revenue forecasts.
